SYNOPSIS

Syngenta is a world-leading agribusiness committed to sustainable agriculture through innovative research and technology. Syngenta helps protect the environment, improve health and the quality of life. Syngenta's technology, diverse portfolio and product support along with technical expertise offer sustainable solutions on which professionals can rely.

Subterranean termites can cause a greater amount of damage to structures than many other natural or man-made catastrophes. It is essential to protect structures through proper building practices and preventive soil treatment. The withdrawal of persistent OC termiticides led to the development of new termite control technologies, as well as more environmental friendly chemicals. The development of these technologies and their applications will be discussed.

Learning Objectives:

- To be familiar with the technology of termite management
- To understand application techniques of the new termiticide

It is imperative to keep abreast with current global termite control trends with enhanced knowledge in termite management technology, at the same time understanding the role and proper usage of termiticides with respect to control, environment and safety.

PROFILE

Dr Chia Tio Huat – Head of Marketing – Syngenta Crop Protection Malaysia –

Currently based in Malaysia. Dr. Chia obtained his Ph D from University of Reading, UK. He was involved in the research and development of agrochemical and public health products, application technology, and advisory to the industry for more than 20 years. He was leading the business development of vector control and pest management products of Syngenta Asia Pacific across the APAC region from 2006 – 2008.
