# KEANE 19 JAN

THE GUEST LECTURE  
SERIES 2016/17

## From Form to Formless

Patrick Keane  
Founder of Enter Architecture

Date and Time——  
19 January 2017  
1830 to 2030

Venue——  
Lecture Room  
LR423, 4th Floor SDE 3,  
Department of Architecture,  
School of Design &  
Environment,  
National University  
of Singapore

Contact/RSVP——  
[akickp@nus.edu.sg](mailto:akickp@nus.edu.sg)

BOA/SIA——  
We have put up the application  
for BOA-SIA CPD Accreditation  
Points for this guest lecture  
event and will keep you  
informed once the application is  
approved.

Enter Projects is a Sydney based design studio currently working Australia wide and in South East Asia. Sitting at the forefront of technologically aided design, they seek to further the culture of Architecture in both Australia and overseas. “From Form to Formless” expresses that a flexible conceptual approach can resonate on projects at many scales and eventuate in producing developed material finish.

The firm prides itself on a broad spectrum of work in both the residential and retail sectors. Digital processes will be discussed from clear inception right through to managing each unique construction process. Rigorous programmatic function and technical requirements will be described and how they shape the final outcomes in conjunction with the established idea/concept. The finished results are inherently fluid and formally dexterous and the lecture will describe the key elements of several projects.

Trained at Princeton University with a Masters in Architecture, Patrick Keane, founder of Enter Architecture worked in New York for 12 years with many internationally recognized architects including Steven Holl and Peter Eisenman. In 2006 he returned to Australia to establish ‘EnterArchitecture’ with offices in Sydney and Perth. This enables the firm to provide extensive international experience combined with local knowledge.

Sitting at the forefront of technologically aided design, Enter seeks to further the culture of architecture in this country and overseas, producing projects of diverse scales with exceptionally high design integrity and material finish. By using cutting edge software to generate new and exciting building forms we are able to create architecture that is dynamic, expressive, and always engaged with its social and local environment.

Enter Architecture has carried out a number of single residential projects, mixed use housing and serviced apartments. The practice is currently designing a boutique residential project at Bondi Beach which is in its development stage. Enter Architecture strongly believes in the need to continuously investigate and develop our design philosophies by placing a high emphasis on sketches, physical models, and 3D investigations. This allows for the design process of each individual project to collectively and continually evolve and grow our understanding and explorations of space and form.
