SYNOPSIS

This talk focuses on innovative coating technology beyond green. Firstly, we will provide a general view of the global market trends and regulations and how they influence the Asia markets. We will then look at the effects of eco-evolution of paints in Singapore market. The next segment touches on the technology and benefits of eco-friendly paints, follows by the presentation of a new product in ICI Dulux Eco-Guard Series of low VOC paints. The last segment introduces the concept and technology of Lumitec™ Technology. We will further explain the enhanced light reflectance performance and energy efficiency property through case study presentation and conclude with a product performance demonstration.

Learning Objective:

Broaden knowledge on innovative coating technology in particular with respect to environmental trends.

How Would Architects Benefit From Attendance?

Understand how Lumitec™ technology can be used in order to achieve sustainable energy efficiency in building design. Awareness of opportunity to specify "new" low VOC products on all interior walls and wood/metal surfaces. Better understanding of the technology behind eco-friendly paints
