## SYNOPSIS

In the context of today's debates on sustainable approaches for high density cities, contemporary architectural practice increasingly seeks new possibilities for integrating green spaces in projects including extensive sky terraces, living facades, vertical parks etc. Combinations of all these, mixed with residential typologies, hotels and offices conjoin at times to produce vertical cities in which the building section becomes what the horizontal plane has entailed up to now.

In Dense+Green, a design studio taught at the Harvard University Graduate School of Design in Fall 2010, students investigated these issues in the context of Singapore's Tanjong Pagar Waterfront, an approximately 150-ha site that is currently part of one of the world's busiest ports. The area has been identified to be Singapore's next waterfront city with a wide range of programs and uses. Being located between the old and the new city and in close proximity to several universities, a large island resort, and the CBD area, it is meant to be packaged with large structures to deliver a plethora of spectacular buildings. The role of this studio was both to question and reason through the transformative pressure that is exerted on this particular site and to find innovative ways of approaching the debates surrounding dense and green building typologies, taking into account their effect beyond their immediate architectural scale and interpreting them as a new collective entity.

SPEAKER'S PROFILE

## Dr. Thomas Schroepfer

Thomas Schroepfer is Principal of Schroepfer + Hee, an interdisciplinary design practice based in Cambridge, Massachusetts and Associate Professor of Architecture at the Harvard University Graduate School of Design (GSD) where he teaches architecture studios and courses on materials and construction.

He has published extensively including in *Journal of Architectural Education*, *Journal of Green Building*, and *DETAIL Green*. His latest book titled *Material Design*, published by Birkhäuser in both an English- and a German-language edition, discusses material innovation in architecture. Schroepfer's projects have received awards and recognitions, including from the *Union Internationale des Architectes* (UIA), and he has lectured widely on his work that has been exhibited in the US, Europe, and Asia.
