

SIA Professional Knowledge Series: Solutions for a Sustainable Future

(in relation to Life Cycle Assessment, Energy Demand, Global Warming)

1. Detailing Strategies For Sustainable Environments

Presented by Guest Speaker, Ms Fatimah, Architect & LEED AP, 15 years of International Practice within Asia, Middle East and Japan with Specializations in Sustainable Design.

2. Life Cycle Assessment and Relevance To Sustainability

Life Cycle Assessment (LCA) is a standardized method to assess and compare the inputs, outputs and potential environmental impacts of products and services over their service life. Find out more about LCA, why is it relevant and how it is used to evaluate the sustainability of products and systems.

3. Global Challenges and Responsibility For The Future

Sustainable development responds to Global Challenges that will shape our future. The key to future success will lie in the development of intelligent solutions to these challenges. Find out what are the Global Challenges and how you can contribute to a sustainable future with solutions that promote the efficient use of energy, water and materials.

4. Cumulative Energy Demand and Global Warming Potential

Cumulative Energy Demand (CED) and Global Warming Potential (GWP) are two of the commonly used impact categories and resource indicators included in an LCA. Find out how the different products and systems, in areas such as basement waterproofing and roofing, measure up in terms of CED and GWP.

5. Initiatives for Indoor Air Quality

Many people now spend more than 80% of their time in indoor environments: home, office, factory, retail, leisure, education and transportation. Find out how environmental hygiene coatings can help to provide a healthy environment and good indoor air quality.
