

Architecture Glass Application In Today's Sustainable Built Environment

The objective of the seminar aim to explain and introduce how latest technology and equipment can further improve glass product quality and performance that can better serve the need of today's building requirement especially in area such as sustainable built environment.

The desire to have high visible light transmittance and natural daylight yet low heat transfer co-efficient has been an issue for a long time. How to effectively reduce indoor and outdoor heat transfer, and keep the indoor temperature steady? Lower shading coefficient, effectively reduce solar heat gain and lower the cooling costs under our hot tropical climate is an important consideration when come to glass selection.

The solution and option are available with the introduction of Triple Silver Low-E coated glass.

The seminar will also present to you the latest glass products availability which you may not be aware or possibly facing problem for a long time.
